

*Workflow...
just the beginning*

FlowMetrix for Keyflow introduces a whole new value dimension to the workflow equation.

Solves All Your Keyflow Reporting Requirements

Workflow helps organizations take a major step toward managing their processes. Keyflow provides an extensive repository of work progress and performance metrics. The ability to collect these metrics into meaningful reports is critical to optimize the value of your workflow investment.

To make the connection between your workflow and meaningful reports, **Dynamic System Solutions, Inc. introduces FlowMetrix**, with many innovative features that leverages Keyflow logging. FlowMetrix provides users and managers with the ability to accurately assess the performance of their processes, identify problem areas, and evaluate solutions.

Empowers Your Users — Reduces Costs and Delays

Reporting has traditionally been difficult, time consuming, and costly. If you factor in the delays associated with report development, costs escalate even higher.

FlowMetrix solves these problems by allowing you to use Keyflow's data and report templates to create hundreds of unique reports from a single report template. This significantly reduces the cost and delay of custom report development.

Provides Immediate Access to Your Up-to-Date Reports

FlowMetrix has the capability to print, e-mail, or publish reports for Web viewing, on demand or as scheduled. Imagine being able to click on an icon to observe the very latest status of jobs relating specifically to you. FlowMetrix provides all that and more.

Meets Your Unique Reporting Requirements

Your organization is unique – and so are your reporting requirements. With FlowMetrix, you get the information you need to make better decisions when you need them. ***The Right Answer, Right Now.***

FlowMetrix comes with a set of five report templates so that you can begin reporting immediately. You can also create your own templates using Crystal Reports Developer, or if you prefer, DSSI has exceptional report template development services available to create unique report templates for you. Contact us at www.dssihq.com/flowmetrix to request your own custom report templates.

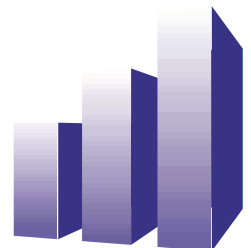

FOR

How FlowMetric Works

Customized Reporting

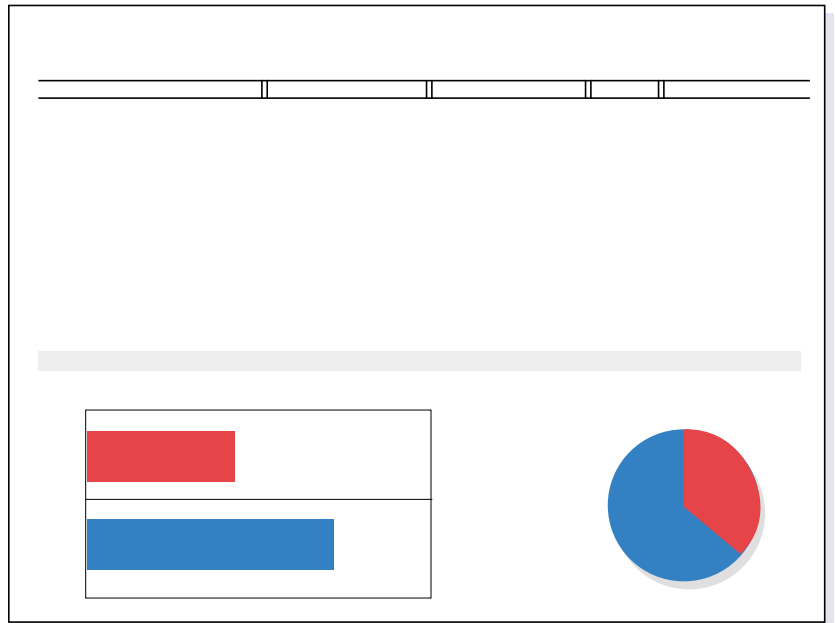

The key to FlowMetric is customized reporting. Users select data filters, output formats, and report templates to create unique reports. Reports may be created in multiple formats including HTML.

Web Publishing and e-Mail

FlowMetric has built-in web publishing and e-mail support. Users can send reports anywhere and automatically publish reports to the web. Users can access the latest reports anywhere, any time.

Scheduling

FlowMetric provides scheduling capabilities that allow reports to be created, printed, published to the web, and/or e-mailed automatically under complete user control. Whether on-demand, at a specified time, at any real-time interval or other required cycle, report creation and distribution is completely under control of the FlowMetric user.

Above is a sample Pending Report. For more information on additional reports and custom development services, visit us on our web site at www.dssihq.com/flowmetric, or give us a call for further assistance.
